

# MobileAIP

Take Your AIP with You...

iOS and Android

MobileAIP from Managed AIS  
**AIM on Demand**  
eAIP in the palm of your hand

# What is **MobileAIP**?

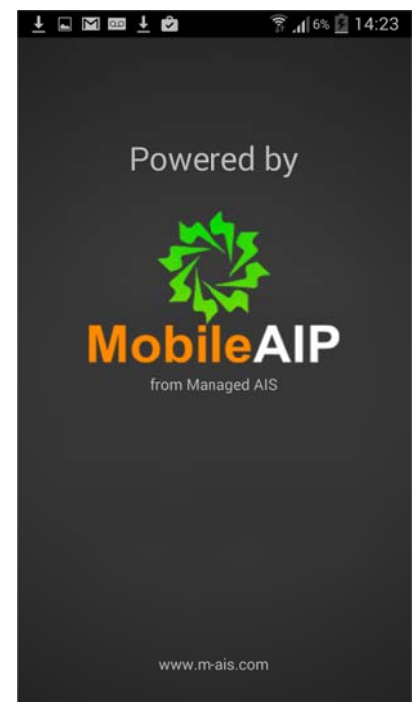

Mobile AIP from Managed-AIS brings your aeronautical information into the 21st century by letting you find and read aeronautical information publications on your smart phone, tablet or other handheld device. Now you can view aeronautical information anywhere, anytime and in anyplace.

## Aeronautical Information Management on demand

**Aeronautical Information Management (AIM)** was developed to provide a better means of data distribution for data providers and data users.

Mobile AIP brings AIM directly to Aeronautical Data Users allowing fast access to eAIP, eSUP, eAIC and Charts from handheld devices running Android and iOS.

The right place for aeronautical information is in the palm of your hand, wherever you are.

## Mobile in every sense

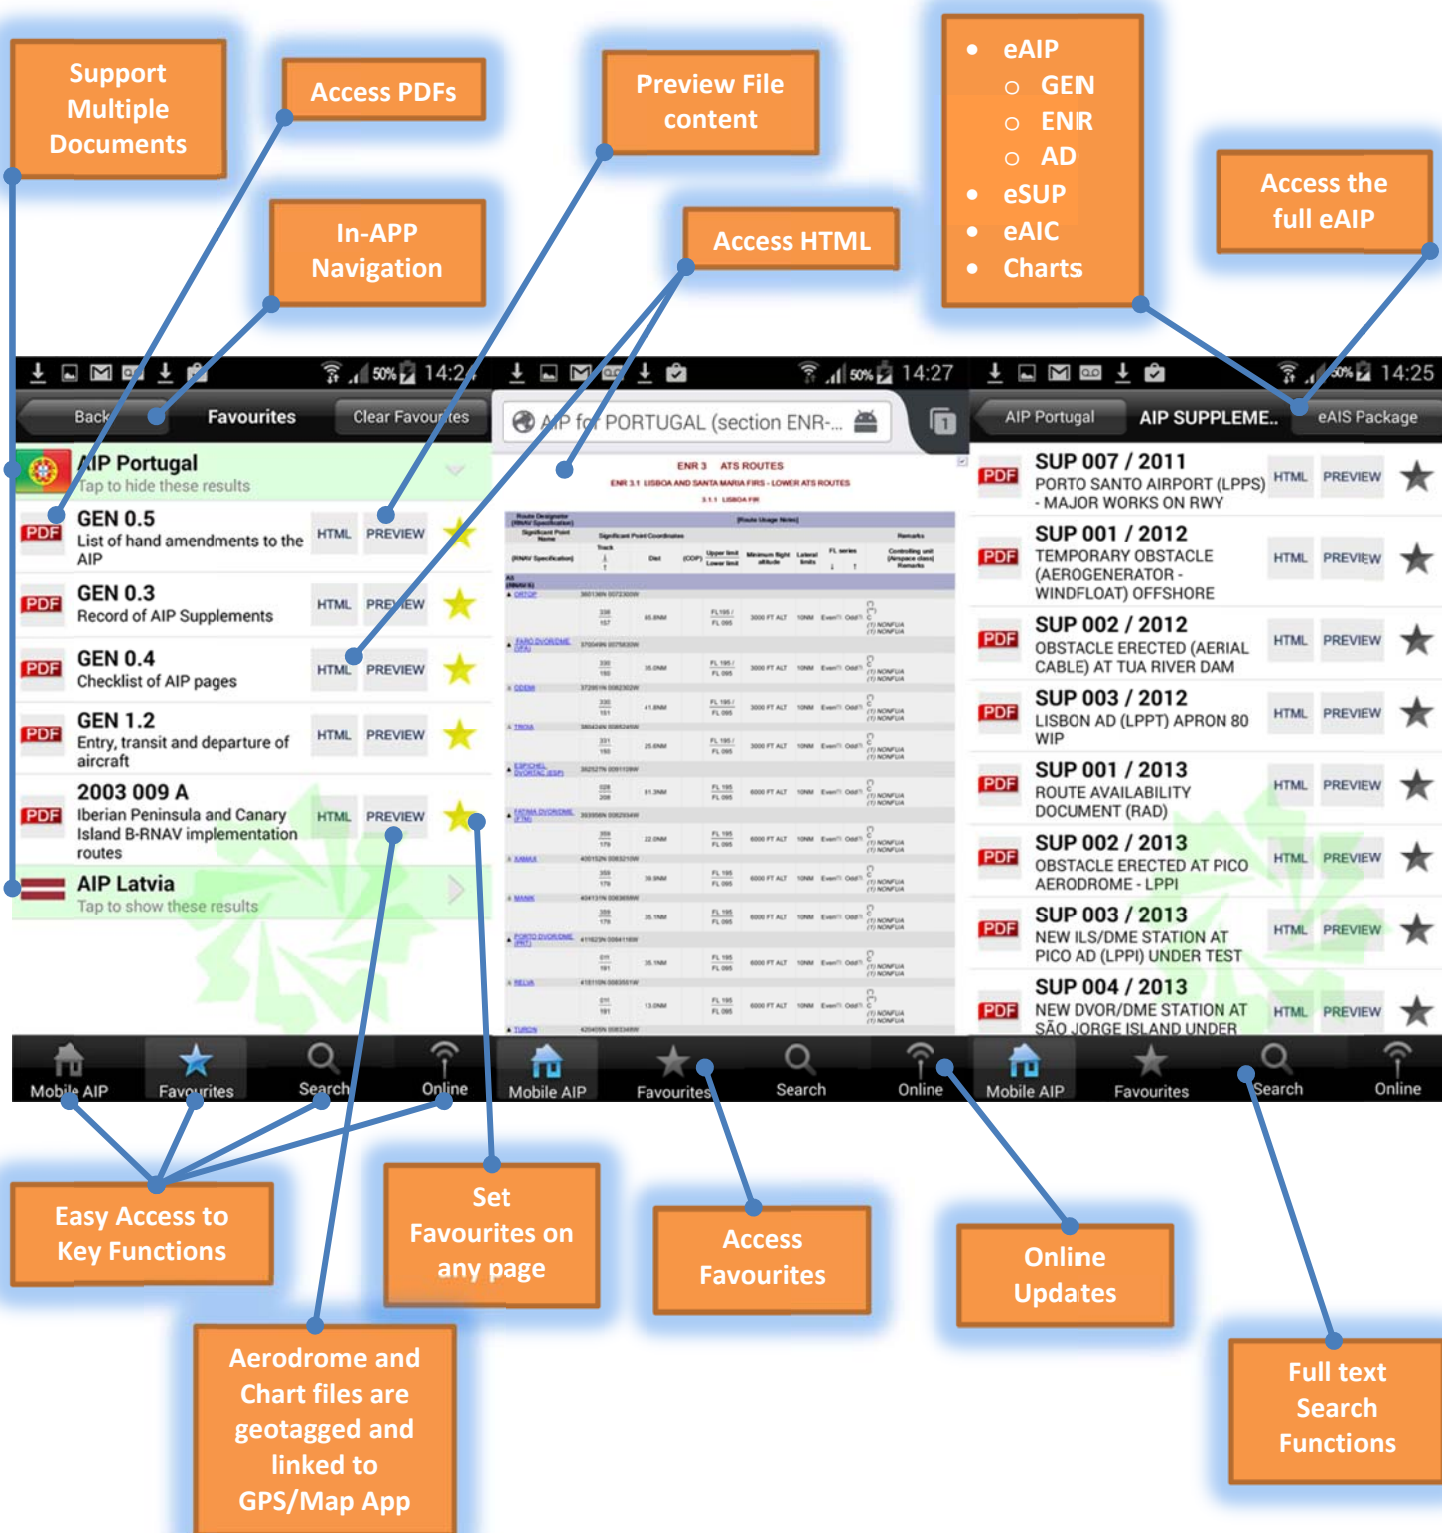

Recent changes in the way aeronautical information is assembled and distributed have focused on moving from paper-based operations to digital technology.

MobileAIP takes things further, combining the eAIP, with the convenience and data security provided by a mobile smart device.

Updates to the documents happen seamlessly every month ensuring that the information is always correct.

# Features of MobileAIP

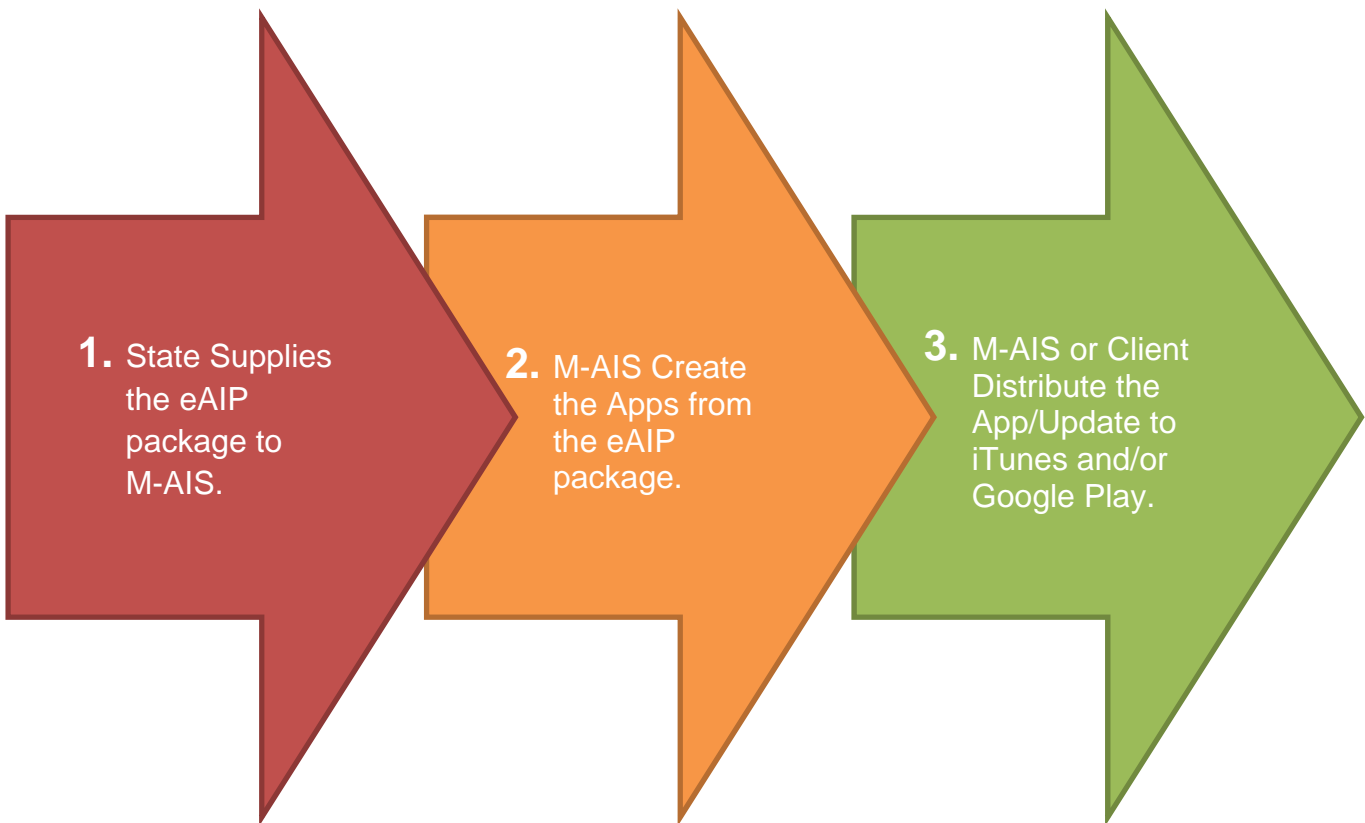

## Provide a clear view of your eAIP information

The Interface for Mobile AIP is designed to offer a clear viewing experience for clients. The Mobile AIP preparation directly utilises information from the state eAIP package to build apps for iOS and android users. The apps are designed with the same look and feel in both mobile platforms to provide a seamless viewing experience

# How it works for you

Each MobileAIP app contains is built from an eAIP package supplied by the state. MobileAIP provides state eAIP suppliers with an additional method of distribution for the AIP on iOS devices (iPhone and iPad) and on phones, phablets and tablets that use the Google Android® operating system.

## ADQ Compliance

Each MobileAIP app is made from only materials and dates found in the eAIP package. No files are changed and a CRC record of file contents is maintained to ensure that ADQ standards are upheld. We even include a full offline viewing version of the eAIP to ensure compliance.
